WE'RE EXPANDING OUR TCK'S...

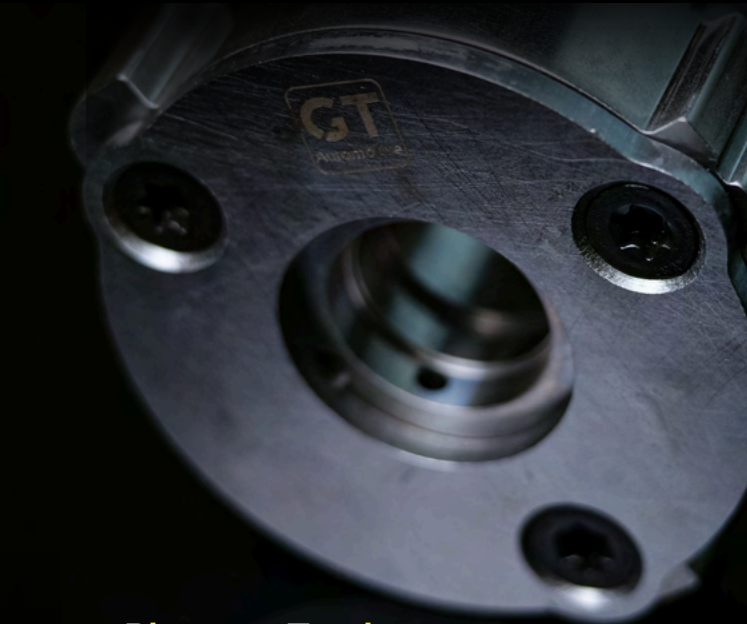

Material Quality

Our guides, made from premium Nylon, resist heat and wear.

Rigorous Testing

Tested for consistent performance and durability.

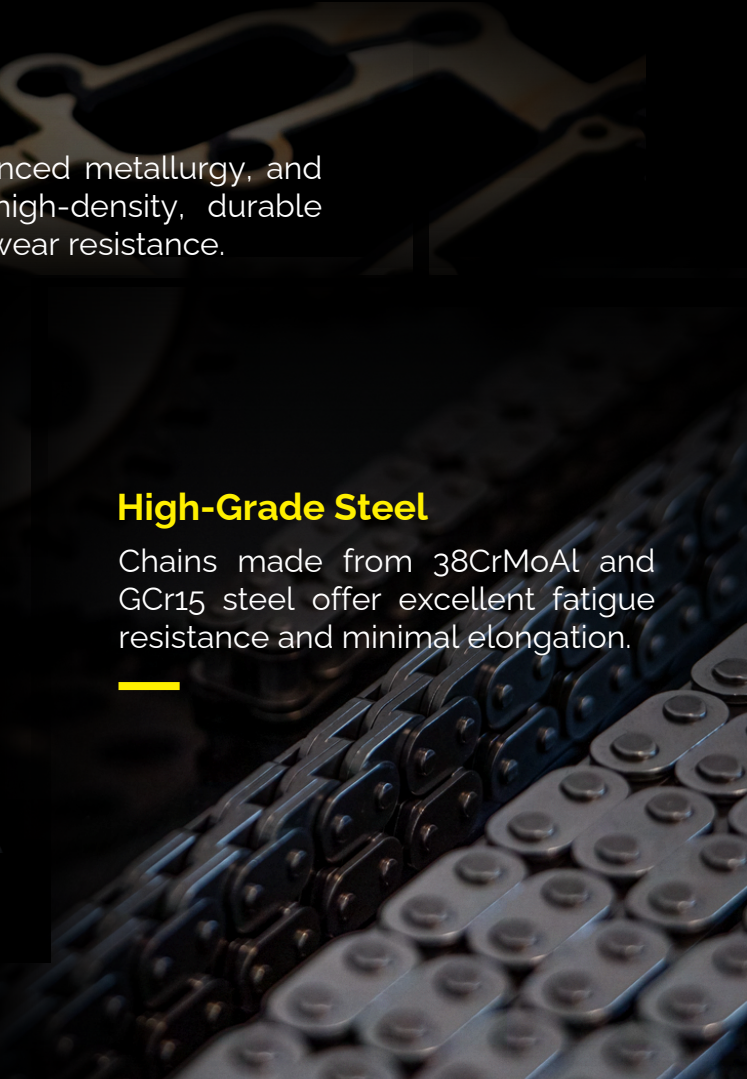

Superior Strength

Precision molding, advanced metallurgy, and CNC finishing ensure high-density, durable sprockets with superior wear resistance.

High-Grade Steel

Chains made from 38CrMoAl and GCr15 steel offer excellent fatigue resistance and minimal elongation.

Precision Manufacturing

Components are precision-molded, forged, and CNC-finished for strength and accuracy.

DURABILITY & PRECISION

Our timing chain kits go through rigorous stress testing to ensure they can handle the demanding specifications of the engine. Our Timing Chain Kits are made to fit most relevant applications, all of our parts are sold as kits, either with or without VVTs and gears, to ensure all components are kept in the same condition and to reinforce their longevity.

A Troublesome Tensioner

Before ✗

This OE tensioner lacks a gasket, causing oil to drain when the engine is off. This leads to a brief chain rattle on startup until the tensioner refills with oil. Chain slack can cause premature wear on both the chain and metal guides, with broken guide pieces potentially ending up in the oil sump.

We have the solution for this

After ✓

Our full timing chain kit features the missing gasket on the problematic tensioner, creating a reservoir for oil to be contained in while the engine is off.
